**Subject:** Rennie Farm Update

Dear Neighbors,

We have conducted the excavation and laboratory waste was removed from the location predicted by the ground penetrating radar survey that was carried out this spring. Approximately 25 soil samples have also been sent to third party laboratories for chemical and radiological analysis and we expect to have the results back in two-three weeks. Please see the laboratory waste test pit excavation work plan for more information and the photos of the excavation on our website <http://www.dartmouth.edu/~ehs/rennie.html>.

For next week, we plan to continue our work on the design of the remedial pump and treat system, install new monitoring wells at 10 different on-site and off-site locations and sample residential wells as requested by homeowners.

Please feel free to contact me if you have questions or concerns.

Sincerely,  
Maureen
