Description: Peerless Pump 1		Equipment #: N/A	
Building: Thompson Arena	Area: Mechanical Room	Revn: 0	Date: N/A Origin Date: 12/18/2017

3  **Isolation Points to be Locked and Tagged**

Safety Is Your Responsibility!

West Side View

ALWAYS PERFORM A MACHINE STOP BEFORE LOCKING OUT DISCONNECTS

ID	Source	Device	Location	Method	Check
	Electrical 208V	Padlock	Isolation point located above unit.	Move electrical disconnect to off. Lock out.	Verify machine is deenergized.
	Condenser Water Suction - 40 PSI	Cap	Isolation point on East side of unit.	Disconnect line and install cap. Lock out.	Visually verify zero pressure status.
	Condenser Water Discharge - 40 PSI	Ball valve device	Isolation point on South side of unit.	Turn valve to closed position. Lock out.	Visually verify zero pressure status.

OPENING A GUARD DOES NOT CONSTITUTE A LOCKOUT

ALWAYS VERIFY DE-ENERGIZATION OF EXPOSED ELECTRICAL PARTS AND RESIDUAL CAPACITANCE

Any machine modifications must be shown in procedure.

Contact EHS to update procedure: 603-646-1762
